EDUCATION

Software Engineering Master
Faculty of Mathematics and Computer Science / Babeș-Bolyai University
10/2026 – Present | Cluj-Napoca

Business Information Systems
Faculty of Economics and Business Administration / Babeș-Bolyai University
10/2023 – 07/2026 | Cluj-Napoca

PROFESSIONAL EXPERIENCE

ROMWEST SRL
Software Engineering Intern
07/2026 – 10/2026 | Alba Iulia

- Developed a prototype electronic archiving system (PHP, MySQL, JavaScript, HTML/CSS), designing the database schema and implementing document upload, storage and display features
- Co-developed an internal document and raw materials management application with the in-house IT engineer, implementing document approval workflows and CRUD operations for the materials accounting department
- Tested and validated the company website's migration to WordPress/WooCommerce, covering page templates, product data and checkout flows before release
- Proposed process automation improvements and worked daily with a technical mentor, using Git, Postman, phpMyAdmin and FileZilla

SKILLS

Languages: JavaScript, TypeScript, Java, C#, Python, PHP, SQL, PL/SQL, C
Frontend: React, Angular, HTML, CSS
Backend: Node.js, Express, Spring Boot, Spring Security, ASP.NET Core, Entity Framework Core, REST APIs
Mobile: .NET MAUI
Databases: PostgreSQL, MySQL, SQL Server, MongoDB, Flyway
Testing: Unit and integration testing, Supertest, pytest, Postman
Tools & Platforms: Git, GitHub, GitHub Actions, Linux
Other: LLM API integration (Google Gemini), Business Intelligence, Big Data fundamentals, Information Systems Analysis and Design, OOP, Data Structures & Algorithms

PROJECTS

FinVision - Personal Finance Platform (Bachelor's thesis)
React, TypeScript, Node.js, Express, MongoDB, Google Gemini

- Designed and built a full-stack platform combining budgeting, investment simulation, financial education and an AI assistant, with requirements grounded in a 55-respondent survey and Pareto analysis
- Structured the backend as a modular monolith of 10 domains with third-party APIs isolated behind dedicated clients, which contained two provider migrations (OpenAI → Gemini, GDELT → MarketAux) to a single file each
- Wrote integration and smoke tests with Supertest and an in-memory MongoDB, including deterministic tests for the AI assistant's off-topic guard

Premier League Match Predictor
Python, pandas, statistical modelling, GitHub Actions, GitHub Pages

- Built a Poisson-based model that outputs match outcome probabilities, evaluated with walk-forward backtesting over ~1,200 matches and strict prevention of future-data leakage
- Improved log loss by 5.4% over a league-average baseline, tuning a time-decay weighting through documented backtest experiments
- Automated publishing of predictions to a static site deployed via GitHub Actions to GitHub Pages

DocFlow - Document Approval & Workflow Platform
Java 21, Spring Boot, Spring Security, PostgreSQL, Flyway, React, TypeScript

- Built a full-stack document approval platform (Java 21, Spring Boot 4, PostgreSQL, React, TypeScript) with role-based review workflows, a four-eyes approval rule and a full decision history.
- Implemented session-based authentication with CSRF protection and server-side identity, and prevented race conditions on concurrent approvals with optimistic locking.
- Wrote 99 automated tests, including integration tests against a real PostgreSQL database with Testcontainers (~80% backend line coverage), run by a GitHub Actions CI pipeline.

CERTIFICATES

Java SmartStart Program
GlobalLogic, Achieved 29/09/2025
